

## Processing recommendations for Rocket

Knitted textiles differs drastically from woven textiles both in terms of performance and construction.

Rocket is a warp knitted textile, and thus we do not recommend any sewing.

To adjust length or width of the textile, simply cut it along the pattern. Thanks to the construction of the textile it will not fray. This also applies if the textile stretches after installation.

Use a pleating tape in the top.

If more pieces of textile are to be installed next to each other, we recommend making a 4 – 6 cm loose overlap instead of sewing them together.
