## 1 Task

On behalf of Kvadrat A/S, DK – 8400 Ebeltoft, the airflow resistance of the fabric Waterborn has to be measured according to EN 29053 [1].

## 2 Basics

This test report is based on the following documents:

- [1] EN 29053 "Acoustics – Materials for acoustical applications – Determination of airflow resistance". 1993

## 3 Test object

The tested material is described by the manufacturer as follows:

- fabric type Waterborn
- manufacturer Kvadrat A/S
- material: 85 % polyester, 15 % polyurethane

The test laboratory has determined the following parameters:

- area specific mass  $m'' = 395 \text{ g/m}^2$
- thickness  $t = 0.90 \text{ mm}$

## 4 Execution of measurements

The airflow resistance was determined according to EN 29053 [1].

The measurements for the determination of the airflow resistance were carried out at different air velocities. The continuous airflow method was applied. The specimen holder has a diameter of 100 mm. The test specimen was fitted flat over the specimen holder, without stretching the material, sealed at the edges and fixed.

According to the standard the specific airflow resistance  $R_s$  is indicated as measurement result which was determined by extrapolation (linear regression) at an airflow velocity of  $u = 0.0005 \text{ m/s}$ .

The test equipment listed in Appendix B was used for the measurements.

## 5 Measurement results

For the tested fabric, type Waterborn, a specific airflow resistance of  $R_s = 16700 \text{ Pa} \cdot \text{s/m}$  was determined.

For further information regarding the measurements, see Appendix A.

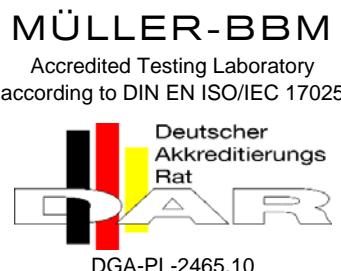

## 6 Remark

The determined test results only refer to the prevailing conditions on the day of measurements.

This test report may only be published and copied as a whole including all of its appendixes. The publishing of extracts requires the prior written consent of Müller-BBM GmbH.
